

TOY CLAPPER**ABSTRACT OF THE DISCLOSURE**

A toy capable of emitting clapping noise, emitting scent, and emitting light. The toy is constructed with an elongated central member and a plurality of resilient ribs which are attached at one of their ends to the elongated central member and are attached at their other end to a sliding collar. The sliding collar is free to slide along the elongated member thereby causing the resilient ribs to move radially outwardly with respect to the longitudinal axis of the elongated central member.
